

Thinners

- General:** The most products of our coating program are provided in ready mixed attitude and viscosity fundamentally. In some precipitation for specific application modes (for example airless-spraying) a supplementary amount of thinner indicated in the technical data sheet is necessary. In these cases and for thinner of thickened material the thinner indicated for the respective product may be employed, where in most cases small extras are sufficient
- Sucking substrate:** In case of sucking substrates (concrete, plaster, floor and so on) in general the first coat is thinned more as the result coats, that will be not or only less thinned.
- Application:** The thinner is always added in thin jet and mixed in well. The maximum addition – as indicated in the data sheet – must not be exceeded since otherwise settling is favored and the necessary film thicknesses will not be achieved.
 For brush- and device purification the corresponding thinners or the general-purpose agent REINIGUNGSMITTEL K can also be employed.

Description	Flashpoint	Danger category: VbF	Suitable for:

Reference to hazards and safety recommendations:

Reference to hazards and safety recommendations when dealing with our products can be found in the most recent Material Safety Data Sheets. The appropriate Material Safety Data Sheets can be downloaded from our homepage www.avenarius-agro.at; on request, they can also be sent by mail.

This technical information has been compiled according to state of the art technology and based on our experience. As to the variety of grounds and object conditions, we cannot be made liable as a result of the contents of our technical information documents. They do not release the buyer/user from their responsibility to professionally and appropriately check our materials with regard to their suitability for the respective application under the respective object conditions.

We hereby expressly point out that we have been unable to address all grounds existing in practice and their treatment in terms of coating in the scope of this document.

This document becomes invalid with the release of a new version.
